

Polyester Mesh Fabric

0501

Description

Weather Barrier approved polyester mesh fabric reinforces elastomeric materials and bridges cracks, seams on roofs, walls and other surfaces for waterproofing protection. It is commonly used to seal cracks, joint flashings, terminations and other open areas.

When used with Weather Barrier 1530, 1650, 1655, 2000, 2010, 1750, Liquid EPDM, Crack Cover, Moisture Cure Urethane, or Liquid EPDM One, the mesh fabric permits a high film build over areas of excessive movement such as cracks and joints. Use of mesh fabric with our elastomeric materials actually diffuses the stress created by a crack or opening in the surface.

WB 201

This polyester warp knit fabric offers a maximum strength for critical areas. The relaxed fabric conforms well to odd shapes such as flashings and metal seams. This mesh holds its shape over protrusions, seams, etc.

Standard sizes:

- 3" x 150' – 270209
- 6" x 150' – 270210
- 12" x 150' – 270211
- 30" x 150' – 270212
- 36" x 180' – 270184

WB 302

This soft finish stitchbond fabric offers maximum strength in critical areas, conforming to odd shapes.

Standard sizes:

- 4" x 180' – 270213
- 12" x 180' – 270214
- 40" x 180' – 270215

WB 403

The high film build produces optimal waterproofing protection in high potential leaking areas. The size and severity of damage to the area to be reinforced determines the size of mesh fabric to be used. This mesh works best over long flat surfaces. It has a memory that wants to remain flat.

Standard sizes:

- 3" x 120' – 270180
- 6" x 60' – 270181
- 6" x 180' – 270182
- 36" x 60' – 270183
- 36" x 180' – 270184

WB 504

A 30 mil adhesive tape with mesh integrated into thermoplastic elastomeric resins. Excellent adhesion to EPDM, asphalt, steel, fiberglass, PVC, and other substrates.

Standard sizes:

- 4" x 50' – 270186
- Custom Sizes Available
